

Product Design Spec - ProductForge-Dashboard

Version 1.0.0 - generated 2026-09-22T15:42:46.802164

Vision

- **Product type:** Product.
- **Domain:** Productivity / developer pipeline operations.
- **Scope type:** Full software product.
- **Elevator pitch:** Product Forge Dashboard is the central control plane for managing, initiating, monitoring, and orchestrating the multi-agent, multi-project Product Forge pipeline.
- **Primary outcome:** Users can manage one project or an entire portfolio of simultaneous pipeline runs from one place, with accurate live status, controlled inputs, logs, and automation.
- **Scope boundary:** The brief does not specify frameworks, databases, authentication details, deployment architecture, or implementation stack; those remain unspecified.

Target Users

- **Primary Persona — Product Forge Operator**
 - Manages projects, pipeline runs, model tiers, configurations, and operation status.
 - Needs a reliable portfolio-level view and precise control over manual or auto-mode execution.
- **Secondary Persona — Agent / Orchestrator Operator**
 - Provides inputs, observes agent progress, controls operations, and reviews logs from an orchestrator perspective.
- **Secondary Persona — Mobile Operator**
 - Needs on-the-go visibility and feasible control workflows through a mobile dashboard companion.
- **Secondary Persona — API Consumer**
 - Uses APIs to retrieve portfolio, project, operation, agent, test, and deployment information for external or customized apps.
- **Anti-Persona**
 - Users who only want isolated single-project execution without portfolio management, centralized status, or dashboard-based orchestration.

Features

Feature	Priority	Status	Description
---	---	---	---
Notes	medium	planned	This is the core feature of the dashboard.
Description	medium	planned	The dashboard shall provide polished UI components and pages for every implemented pipeline feature, configuration, and module.
			Each pipeline feature, configuration, and module has a corresponding UI page or component.
	medium	planned	Each pipeline feature, configuration, and module has a corresponding UI page or component.
			The UI is responsive and works as a PWA.
	medium	planned	The UI is responsive and works as a PWA.
Description	medium	planned	The dashboard shall be available as a responsive PWA that complements the web dashboard with feasible and needed workflows for monitoring, inputs, controls, notifications, and project management.
			Dashboard is installable as a PWA on mobile and desktop.
	medium	planned	Dashboard is installable as a PWA on mobile and desktop.
